

Maximum Consecutive Ones

Given an array A of 0s and 1s, we may change upto K values from 0 to 1.

Return the length of the longest (contiguous) subarray that contains only 1s.

$n=11$

input: $A = [1, 1, 1, 0, 0, 0, 1, 1, 1, 1, 0]$, $K=2$

output: 6 : explanation: $[1, 1, 1, 0, 0, \underline{1}, 1, 1, 1, \underline{1}]$

input: $A = [0, 0, 1, 1, 0, 0, 1, 1, 1, 0, 1, 1, 0, 0, 0, 1, 1, 1, 1]$

$K=3$, output: 10, explanation: $[0, 0, \underline{1}, 1, \underline{1}, 1, 1, \underline{1}, 1, 1, 0, 0, 0, 1, 1, 1, 1]$

Idea:-

- ★ Longest subarray ~~हूँ~~ जिसमें atmost K zeroes हों।
- ★ For each $A[j]$, try to find the longest subarray
- ★ If $A[i] \sim A[j]$ has zeroes $\leq K$, we continue to increment j .
- ★ If $A[i] \sim A[j]$ has zeroes $> K$, we ^{increment} ~~continue~~ i (as well as j).

Dry run eg $K=2$, $i=0 \ 1 \ 2 \ 3 \ 4$
1 1 0 0 0

$z=0, i=0, ans=0, j=0 \text{ to } n$

Step-1 $j=0, arr[0]==0 \times$ and $z \neq 0 > 2 \times$

simple $ans = \max(0, 0-0+1)$
 $ans = 1$

Step-2 $j=1, arr[1]==0 \times$ and $0 > 2 \times$

$ans = \max(1, 1-0+1) = \max(1, 2) = 2$

Step-3 $j=2, arr[2]==0 \checkmark$ and $1 > 2 \times$
 $z++;$

$ans = \max(2, 2-0+1) = \max(2, 3) = 3$

Step-4 $j=3, arr[3]==0 \checkmark$ and $2 > 2 \times$
 $z++;$

$ans = \max(3, 3-0+1) = \max(3, 4) = 4$

Step-5 $j=4, arr[4]==0 \checkmark$ and $3 > 2 \checkmark$

$z++;$

$arr[0]==0 \times; i++;$

$arr[1]==0 \times; i++;$

$arr[2]==0 \checkmark; i++ - \text{so } z=2$
 $i++;$

$ans = \max(4, 4-3+1)$
 $= 4$

$ans = 4$
